Design Technology at Tenacres

Implementation

At Tenacres our Design Technology curriculum is delivered by:

- Following the progression of knowledge and skills document.

- Working together as a school to ensure skills from previous years are built on, not repeated. (As well as use of progression knowledge of skills.)

- Ensuring teachers have sound subject knowledge, and if they need support they can go to the subject co-ordinator for help.

- High quality teaching and planning.

- Creating projects that are meaningful and are related to children's topics, helping them to learn in context.

- Delivering exciting lessons that create enthused learners. Children enjoy their Design Technology lessons and love learning and applying new skills.

- Encouraging children to become more independent when planning and creating their products and projects.

- Create a learning environment where children feel safe to express their ideas freely through their designs.

- Create an environment where children aren't afraid to make mistakes, are resilient and will always try again if things go wrong!
